

Inner-Tank Pre-heating High-Pressure Solar Water Heater

SSBP-150-15

15-Tube Inner-Tank Pre-heating Solar Water Heater

The SSBP-150-15 uses 15 evacuated glass tubes measuring 58 mm × 1,800 mm together with an internal pre-heating tank. Solar energy stored in the main tank transfers heat to the pressurised water circuit, providing efficient solar pre-heating before the water enters the household hot-water system.

Applications

Suitable for homes, villas, hotels and commercial buildings where solar pre-heating can reduce the energy required by an electric, gas or other auxiliary water heater.
